THE SCHOOL OF MINES
THE PENNSYLVANIA STATE COLLEGE
STATE COLLEGE, PA.

President R. G. Falconer,
University of Toronto,
Toronto,
Canada.

Dear Sir:

While speaking to Dr W. G. Miller, recently he stated that you had a discussion of Toronto on the subject of resistance and heating methods. Thinking therefore that you might be interested in a short article, which I wrote, summing up my observations on this subject in Canada, United States and Germany, I take pleasure in sending you a copy of it.

As an alumnus of the University of Toronto I extend my best wishes to you for continued success in keeping Toronto one of the foremost of educational institutions.

Very truly yours,
E. D. Adams
(Professor of Electrical Engineering)

Mr. E. S. Moore,

School of Mines,

Pennsylvania State College.

My dear Mr. Moore:

Many thanks for your kind letter and your article on "Lecture and Recitation Methods in University Instruction" which I have just received. I have just read the article with a great deal of interest, and I congratulate you on the clearness with which you have outlined the two systems and the discrimination which you have shown. I myself see great merits in the lecture system. I think that wherever it is possible to supplement the lecture system by the tutorial system, which we are endeavouring to introduce into some departments in the University the best results will be obtainable. Also, by raising the standard of entrance we are getting rid of the poorer student, who should be in school, and he is the one for whom the recitation method, as you say, is most valuable. With kind regards, I am, Yours sincerely,

President.
